PROFILE

Flutter developer building cross-platform mobile applications since 2022. I own products end to end — requirements, build, and deployment. Founded and launched PlaySwap, a platform for independent mobile developers with 135+ registered users, and delivered production management systems for manufacturing clients. Comfortable working across mobile and web, with a track record of shipping working products on short timelines.

EXPERIENCE

Software Developer

2023 – Present

Freelance

- Built a complete factory management system for Al-Haram Plastics covering attendance, production orders, suppliers, bonuses, expenses, and a live management dashboard — replacing a fully manual process.
- Delivered a second ERP system for a manufacturing client with similar operational scope.
- Shipped a full client project end to end in two weeks, from requirements to deployment.
- Work directly with clients on scoping, delivery, and post-launch support.

Freelance Developer

2023 – Present

Upwork & Mostaql

- Delivered client projects through Upwork and Mostaql, maintaining a 5.0 / 5.0 client rating.
- Handle the full cycle independently: requirement gathering, development, delivery, and revisions.

SELECTED PROJECTS

Athar 🌐

Published Flutter app for daily Islamic practice. Offline-first: Quran, tafsir, adhkar and qibla all work with no connection. Reduced install size from 67MB to 21MB by streaming Quran page fonts on demand instead of bundling them. No backend — all state on device. Fully Arabic/RTL.

Tarjoman 🌐

Real-time translation platform built entirely on a WebSocket architecture. Six web applications and one mobile app from a single shared Flutter codebase. Handled connection lifecycle on mobile — reconnection, message queuing during dropouts, and surfacing connection state to the user instead of failing silently.

PlaySwap 🌐

Founder & developer. A community platform helping independent developers meet Google Play's 12-tester / 14-day closed testing requirement. 135+ registered developers. Built with Next.js and Supabase.

Radar 🌐

Flutter + web app for the Egyptian Exchange (EGX). Portfolio tracking, live prices, stop-loss levels, and position-size calculation.

NoteChat

Flutter app that converts voice recordings into structured notes and task lists using AI.

TECHNICAL SKILLS

Mobile

Flutter, Dart, Android & iOS, REST API integration, state management (BLoC, Cubit)

Web

Next.js, React

Tools

Git, GitHub, Vercel, Figma

Backend & Data

NestJS, Node.js, PostgreSQL, Supabase, Prisma

Integrations

Meta WhatsApp Cloud API, Webhooks, OAuth, Gemini AI, Web Scraping

EDUCATION

B.Sc. Computer Science

Ahram Canadian University (ACU)

Coursework in Artificial Intelligence, Data Science, and Big Data.

2024

Egypt

LANGUAGES

Arabic

Native

English

Intermediate (technical reading, documentation, and written communication)
